

## TRI-METAL ZX Zone Extension Irons

Orlimar's Tri-Metal ZX Irons are an all-hybrid iron set that combines high-tech engineering with modern design and innovative styling. The stainless body, tungsten weights, and aluminum cavity plate synchronize flawlessly to achieve maximum perimeter weighting and an extremely low center-of-gravity. In addition to these material advancements, the Tri-Metal ZX Irons are enhanced with an offset geometry design for fade control. All these features add up to an exceedingly forgiving, consistent set of irons. To extend your zone of success, try Orlimar's Tri-Metal ZX (Zone Extension) Irons.

- High-performance stainless head
- Aluminum cavity insert
- Tungsten sole weights
- Golf Pride® New Decade grips
- Powered by Aldila® graphite shafts

Orlimar® Pro series Aldila® Graphite Shafts

Golf Pride® New Decade Grip

## Features & Benefits

- **Hollow Bodied to Improve Stability.** This All-Hybrid 4-SW set, combines three distinctive metals in a hollow body design to produce incredible consistency and performance. Even the results of off-center hits are noticeably reduced.
- **Strategically Placed Dual Tungsten Weights.** Orlimar uses high density tungsten precisely located in the sole to counteract off-center hits and promote a higher launch angle. Transferring weight to the heel and toe enlarges the sweet spot and produces a penetrating ball flight.
- **Aluminum Cavity Back for Maximized Perimeter Weighting.** The Tri-Metal ZX Iron's aluminum cavity back is extremely lightweight. Because aluminum is nearly three times lighter than stainless, the residual weight can be redistributed. The result? Improved stability and easier launch conditions. More consistent shot-making means lower scores.
- **Ultra Thin Face for Outstanding Performance.** The 17-4 stainless thin face is engineered to allow weight to be distributed where it will be most beneficial; lower and around the perimeter. This highly responsive iron face combines power with maximum perimeter weighting control.
- **Offset Design for Enhanced Fade Control.** Designed into the Tri-Metal ZX Iron is an offset geometry for draw bias. The tendency to fade is counteracted by allowing the face to square up at impact. Straighter shots equal lower scores.
- **Pro Series Aldila® 60 Low-torque Shafts.** Tri-Metal ZX Irons are powered by the Aldila 60 Pro Series low-torque shaft. These shafts are performance-matched to the head's unique properties. The shaft's torque, or resistance to twisting on the downswing, is optimized to withstand centrifugal swing forces. This provides the golfer with the accuracy of square impact while allowing the shaft's flex-response to impart maximum force through impact.
- **Golf Pride® New Decade Rubber Grip.** With a new look and feel, these grips utilize an innovative composite rubber formula for all weather control. Made especially for Orlimar, these all black grips have the Orlimar logo on the cap-side and lower-hand area. With the #1 grip on the PGA Tour, Golf Pride remains the right choice for performance.
